

PARTNERSHIP AIMS TO IMPROVE OPERATIONAL EFFECTIVENESS OF U.S. GOVERNMENT SATELLITE COMMUNICATION DEPLOYMENTS

By Light, GVF and SatProf Team to Deliver VSAT Installation Certification for Technical Specialists Serving with U.S. Military and Other Government Agencies

ARLINGTON, V.A.--[By Light Professional IT Services](#) (By Light) has teamed with the Global VSAT Forum ([GVF](#)) to provide online and hands-on VSAT installer training courses to help combat the costly increase of satellite interference. The online GVF Certified VSAT Installer Training Courses are administered and provided exclusively by [SatProf](#), a company dedicated to E-learning for Satellite Professionals.

By Light will provide Hands-On Skills Test (HOST) at the By Light Integration Center (BIC) located in Fayetteville, NC. Arrangements can also be made to provide the HOST to a group of students at other locations when required. Students who complete GVF Advanced VSAT Installer Certification and any Specialty Certification may be posted in the GVF's [Global VSAT Installers' Database](#).

The GVF training courses have been reviewed and certified by the Satellite Users Interference Reduction Group ([SUIRG](#)), a global industry organization dedicated to stopping satellite radio frequency interference (RFI) before it begins.

Significant time, effort and resources are dedicated each year to the tracking, identification and elimination of satellite interference and By Light is excited about the opportunity to work with GVF to help mitigate future satellite interference in both the government and commercial industries. “This training offers SATCOM operators and service personnel, civilian and military alike a chance to credential their existing skills and learn new ones that can advance them to the next level in their careers”, said Keith Bodiford, Director of SATCOM Programs for By Light.

About [By Light](#): By Light, an ISO 9001: 2008 registered, Service-Disabled, Veteran-Owned Small Business based in Arlington, VA provides a broad range of hardware and software engineering and IT integration services. By Light's Satellite Communications competency includes Field Service Support, SATCOM Hub Installation and Operations, Base Band Design, Integration and Packaging. The company is a well established government contractor that was founded in November of 2002 by a group of industry and DOD professionals with extensive knowledge and experience in both the commercial and federal

sectors. With approximately 110 employees deployed worldwide, By Light provides quality IT services to both public and private clients alike.
